

Fixed Asset Management & Tracking Solution

## Asset Management... made easy!!

Assets, whether IT or non- IT, play a pivotal role in every successful business activity. Effectively managing your assets is critical to your business.

Orion lets you track and manage the physical, contractual and financial data associated with the assets in your environment throughout their lifecycle – from receiving through disposal. The solution empowers you with a firm understanding of how your assets are being used to help identify cost savings, fulfill compliance initiatives, and justify business decisions.

## System Highlights

- ✓ **Centralized, up-to date repository** replaces multiple spreadsheets and databases. Categorization based on user defined attributes
- ✓ **Increased Productivity** – Spend less time tracking down assets
- ✓ **Reduced capital and operational costs** resulting from better maintenance and improved visibility. Unallocated assets can be reassigned or eliminated.
- ✓ **Increased credibility with senior management** based on comprehensive asset information. Justify service costs based on hard data
- ✓ **Regulatory and statutory reporting**

**Organizations that systematically manage the life cycle of their assets reduce the cost per asset by almost 30% in the first year**

## Orion Vs Excel

While excel sheets seem to be a cost effective solution, asset managers constantly struggle to manage an ever-growing asset portfolio. Poor visibility and traceability of asset base and the resultant time consuming, mundane physical audits make asset management seem like a herculean task.

Orion simplifies this job through comprehensive reports correlating service agreements with actual inventory, contact and location information in addition to costs. Built-in notification policies help avoid costly penalties by automatically notifying the responsible personnel about expiring warranties, maintenance contracts and payments that maybe due. Integration with Barcode/RFID based inventory solution enables reliable and quick audits. RFID can also help real time tracking and update of asset movement and user information.

## System Features

- ✓ Vendor management
- ✓ Asset entry and modification
- ✓ Historical reporting of asset allocation /re-allocation / movement
- ✓ AMC, Warranty, Insurance, Allocation Expiry Alerts
- ✓ Maintenance scheduling and asset ownership cost tracking
- ✓ Real-time tracking of Mobile Asset movement
- ✓ Customisable Reports
